JOURNAL: *Nematropica* 27 (2):p191-207 Dec., 1997

ISSN: 0099-5444

DOCUMENT TYPE: Article

RECORD TYPE: Abstract

LANGUAGE: English

SUMMARY LANGUAGE: English; French

...ABSTRACT: with clear plastic were lower than those in nontreated soil, but those of bacteria were \*similar\*. Phytoparasitic and nonparasitic nematode population densities were reduced by the nematicide and by \*mulching\* with either \*color\* of plastic, but sometimes rose to the initial levels by the time of harvest. Plastic \*mulching\* significantly controlled weed growth but many of the monocotyledonous \*plants\* in the field grew in soil under the clear plastic.

RECORD TYPE: Abstract

LANGUAGE: English

...ABSTRACT: In spring 1991, with large whitefly populations towards the end of the season and few \*plants\* with virus symptoms at harvest, yields were \*similar\* with all mulch treatments. Most immature and adult whiteflies were on the white in the fall and on the black \*mulch\* in the spring. With other \*mulch\* treatments, a definite trend could not be established between \*mulch\* \*color\* and number of whiteflies observed on the \*plants\*. Yellow \*mulched\* tomato \*plants\*, when sprayed as needed with the soybean oil emulsion or the aluminum mulch, would be...

...Research Farm in Rock Springs, PA, Michael

Orzolek and William Lamont offer these recommendations for \*matching\* \*mulch\* \*color\* to specific crops. Keep in mind that these combinations work best in the Northern U.S.

Tomato - On red \*mulch\*, there was an average 12% increase in marketable yield over three years, plus a reduction in early blight incidence compared to \*plants\* grown on black mulch.

Pepper - Silver mulch produced an average 20% increase in marketable...
